In the documentation, Stormshield Network SSO Agent is referred to in its short form: SN SSO Agent and Stormshield Network Security under the short form SNS.

This document is not exhaustive and minor changes may have been included in this version.

New features in version 3.0.2

Compatibility - SN SSO Agent for Windows

SN SSO Agent for Windows in version 3.0.2 is now a 64-bit service. It is therefore compatible only with 64-bit operating systems.

Resolved vulnerabilities in version 3.0.2

Installation

A moderate severity vulnerability was fixed in the SN SSO Agent installation mechanism.

Details on this vulnerability can be found on our website

<https://advisories.stormshield.eu/2022-001/>.

Compatibility

The following platforms are compatible with SN SSO Agent 3.0.2.

Windows systems

Stormshield Network Firewall	Active Directories
4.2 and higher	Windows Server 2012 R2, 2016, 2019 and 2022

i NOTE
If SN SSO Agent prior to version 1.4 was previously installed, the service must be uninstalled before beginning the installation of SN SSO Agent.

Linux systems

Stormshield Network Firewall	Operating system
4.2 and higher	Ubuntu 18.04 LTS 64-bit

Explanations on usage

Authentication

If a user known to the SN SSO Agent uses another login from the same domain, the firewall may cancel the identification of this user. The second identification is relayed by the domain controller, which replaces the initial session. Such cases occur especially for the following types of access:

- Login to an intranet using the *kerberos* and/or *ntlm* method,
- Mounting of shared remote resources, e.g., files and printers, via the SMB protocol,
- Login to RDP Terminal Services on a remote server.

Syslog

Communications with the syslog server must be in UDP. Since this protocol does not guarantee confidentiality or integrity, we recommend that you secure communications between non-Windows directories, such as Samba 4, and the syslog server to prevent potential security risks that include IP address spoofing, or the injection of unauthorized syslog messages to the firewall.

Secure these communications by physically segmenting the network, setting up a VLAN, or using IPsec, SSH or SSL tunnels. Alternatively, a TLS syslog server relay can also be placed between the hosts concerned.

Documentation resources

The technical documentation resources are available in the documentation base on the [Stormshield technical documentation](#). We suggest that you rely on these resources for a better application of all features in this version.

Please refer to the Stormshield [Knowledge base](#) for specific technical information and to watch videos that the TAC (Technical Assistance Center) has created.

Downloading this version

Going to your MyStormshield personal area

You need to go to your [MyStormshield](#) personal area in order to download the 3.0.2 version of SN SSO Agent:

1. Log in to MyStormshield with your personal identifiers.
2. In the left panel, select **Downloads**.
3. In the right panel, select the relevant product and version.

Checking the integrity of the binary files

To check the integrity of SN SSO Agent binary files:

1. Enter one of the following commands and replace `filename` by the name of the file you want to check:
 - Linux operating system: `sha256sum filename`
 - Windows operating system: `CertUtil -hashfile filename SHA256`
2. Compare with hashes provided on [MyStormshield](#) personal area, section **Downloads**.

Previous versions of SN SSO Agent 3

In this section, you will find the new features, resolved vulnerabilities and fixes from previous versions of SN SSO Agent 3.

3.0.1	Resolved vulnerabilities	
3.0.0	New features	Bug fixes

Resolved vulnerabilities in version 3.0.1

OpenSSL

A moderate severity vulnerability was fixed after the OpenSSL component was upgraded.

Details on this vulnerability can be found on our website

<https://advisories.stormshield.eu/2021-018/>.

New features in version 3.0.0

Authentication

SN SSO Agent now supports TLS v1.2 when it sets up a connection to the firewall's authentication service.

Not all versions of SNS support TLS v1.2. For further information, refer to [Compatibility](#).

Installing in Windows

Initially offered in the form of an executable file, SN SSO Agent for Windows is now only available as an MSI (Microsoft System Installer) package. It can still be deployed locally, or through a GPO (Group Policy Object) in a Microsoft Active Directory domain.

Version 3.0.0 bug fixes

System

Microsoft Windows Server 2016

The Microsoft libraries vcruntime140.dll and msvcrt140.dll were added to the SN SSO Agent installation program. **Support reference 77539**

Event time difference/SSO Agent

Whenever an authentication event occurred with a more recent date than on the machine that hosts SN SSO Agent, authentication of the user in question would be denied. This anomaly has been fixed. **Support reference 78457**

Detecting disconnections with pings

Enabling the detection of disconnections with pings no longer causes SN SSO Agent to freeze unexpectedly. **Support reference 78379**

Contact

To contact our Technical Assistance Center (TAC) Stormshield:

- <https://mystormshield.eu/>

All requests to technical support must be submitted through the incident manager in the private-access area https://mystormshield.eu, under **Technical support > Report an incident / Follow up on an incident**.

- +33 (0) 9 69 329 129

In order for us to provide high-quality service, you are advised to use this communication method only to follow up on incidents that have been created earlier on <https://mystormshield.eu>.
